

NarniaLaundry

Taking over Toronto

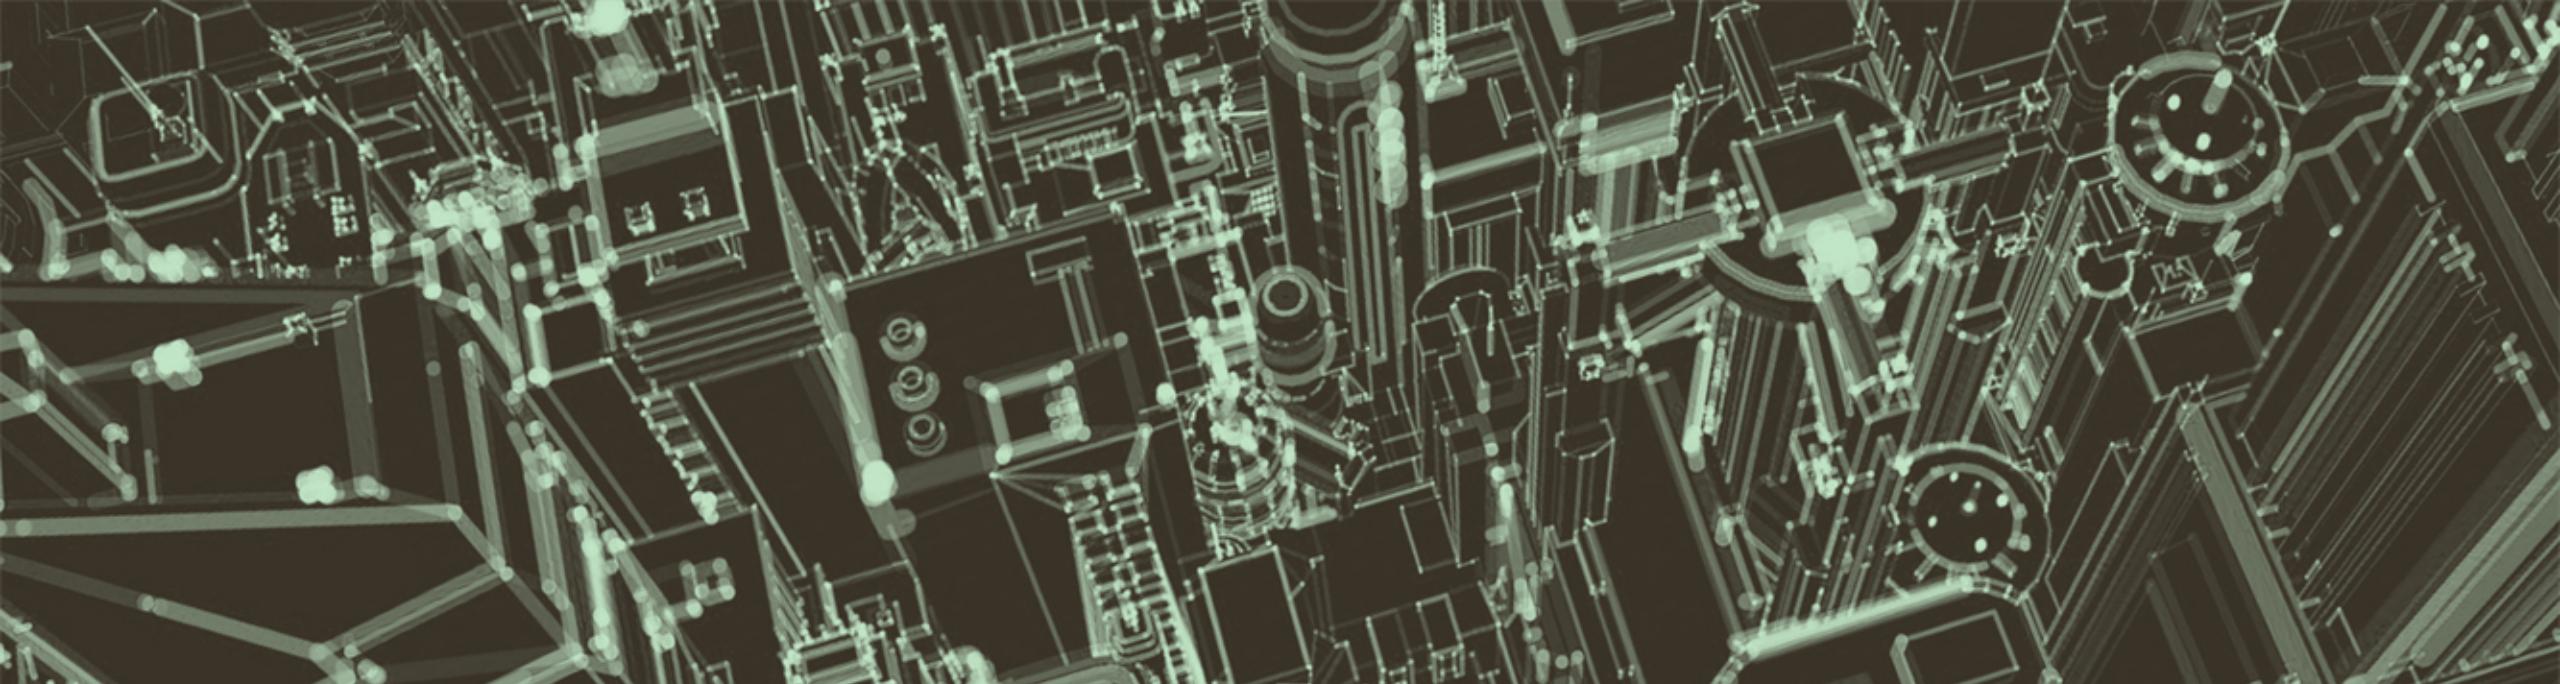

Intro

Preliminary steps to ensure profitability of FSLF in an unknown city landscape.

Data

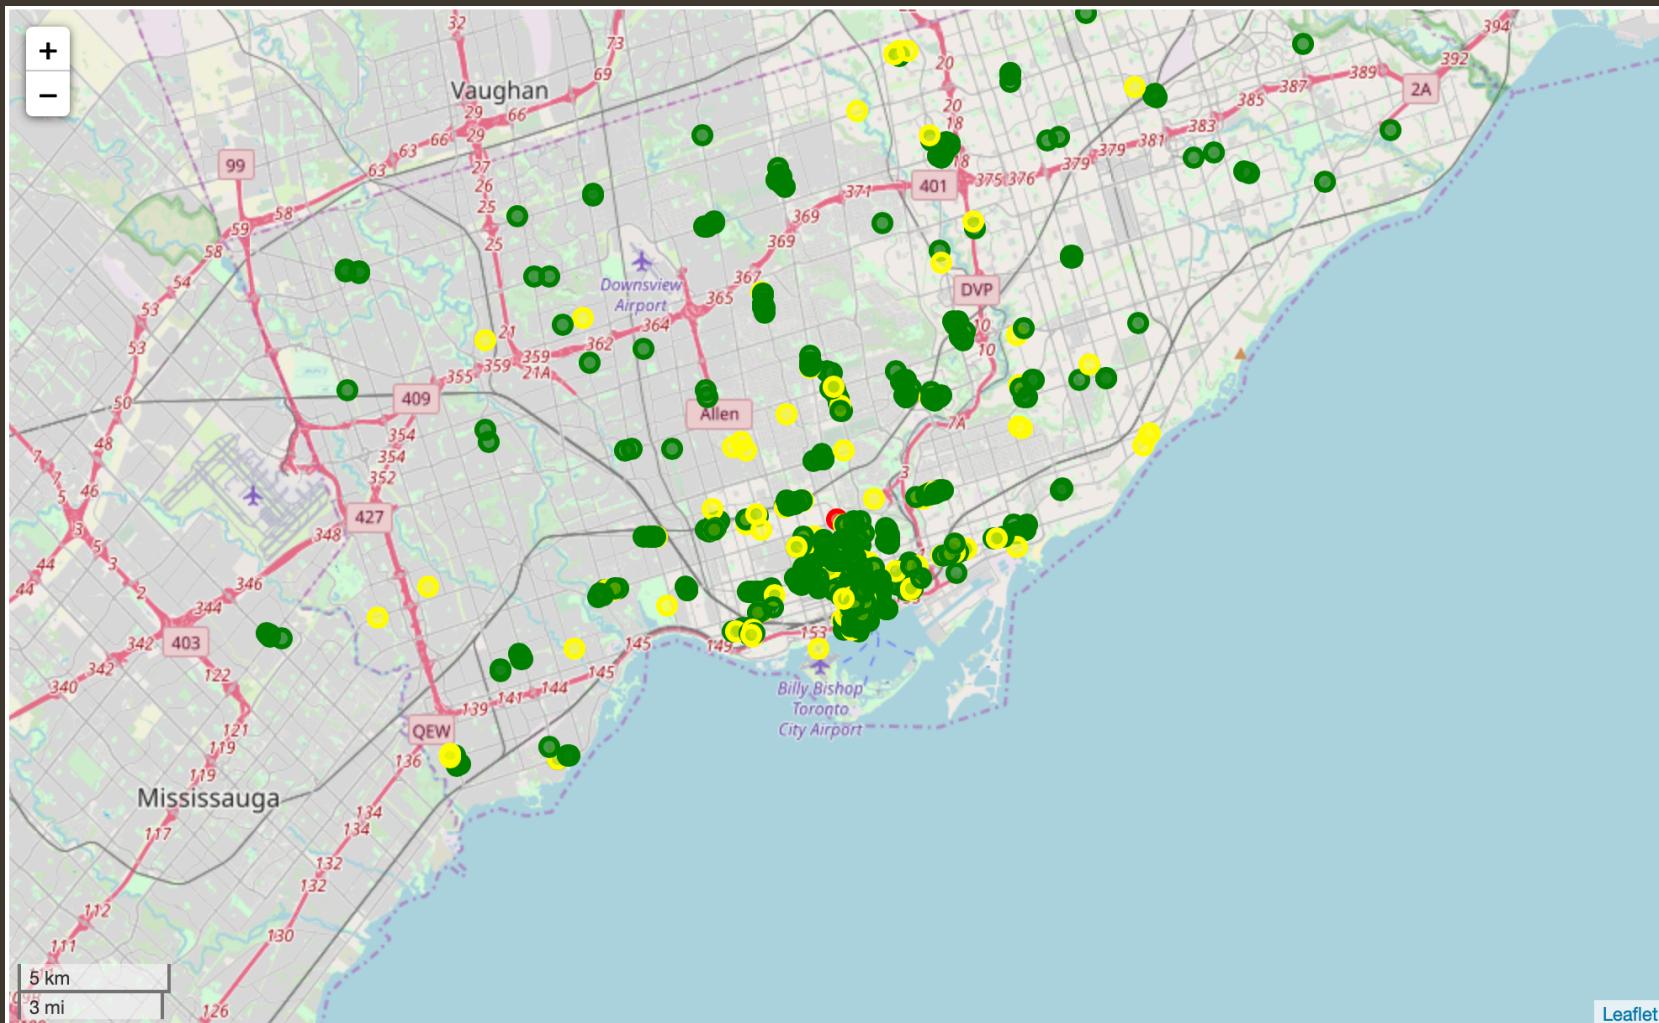

Working with a list of all the venues in Toronto retrieved from foursquare.com and from wikipedia.com

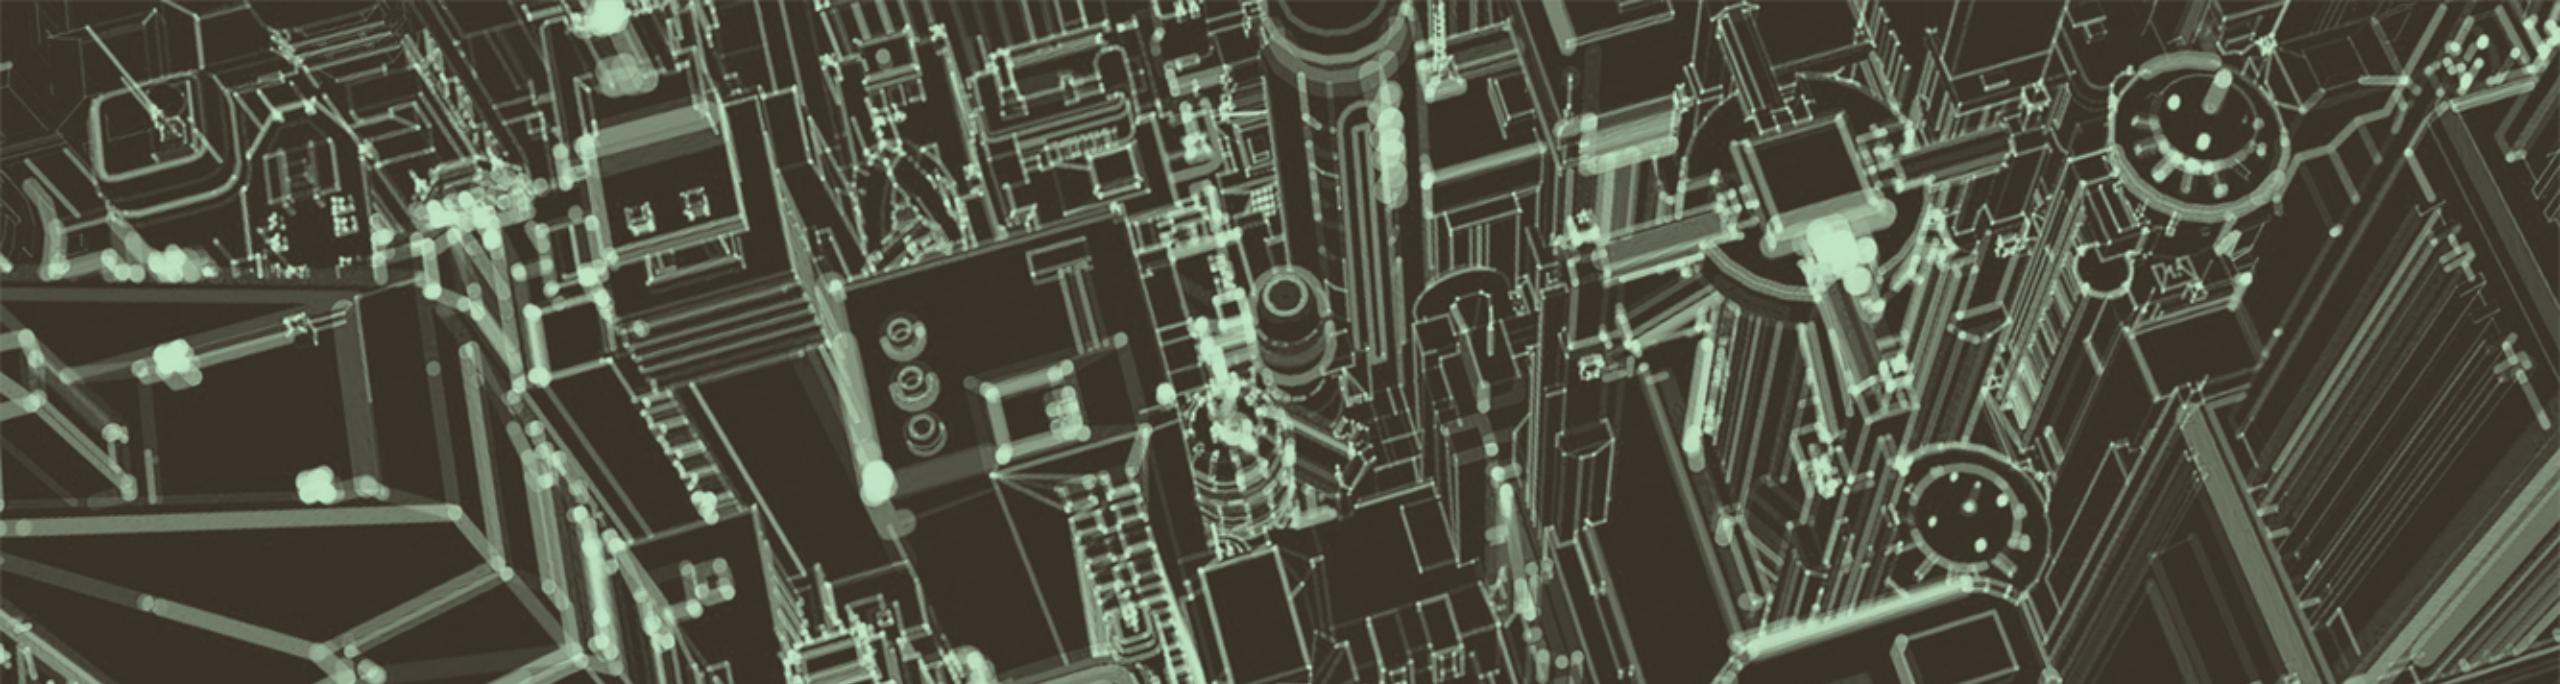

Methodology

We are marking our venues by type and refining the dataframe.

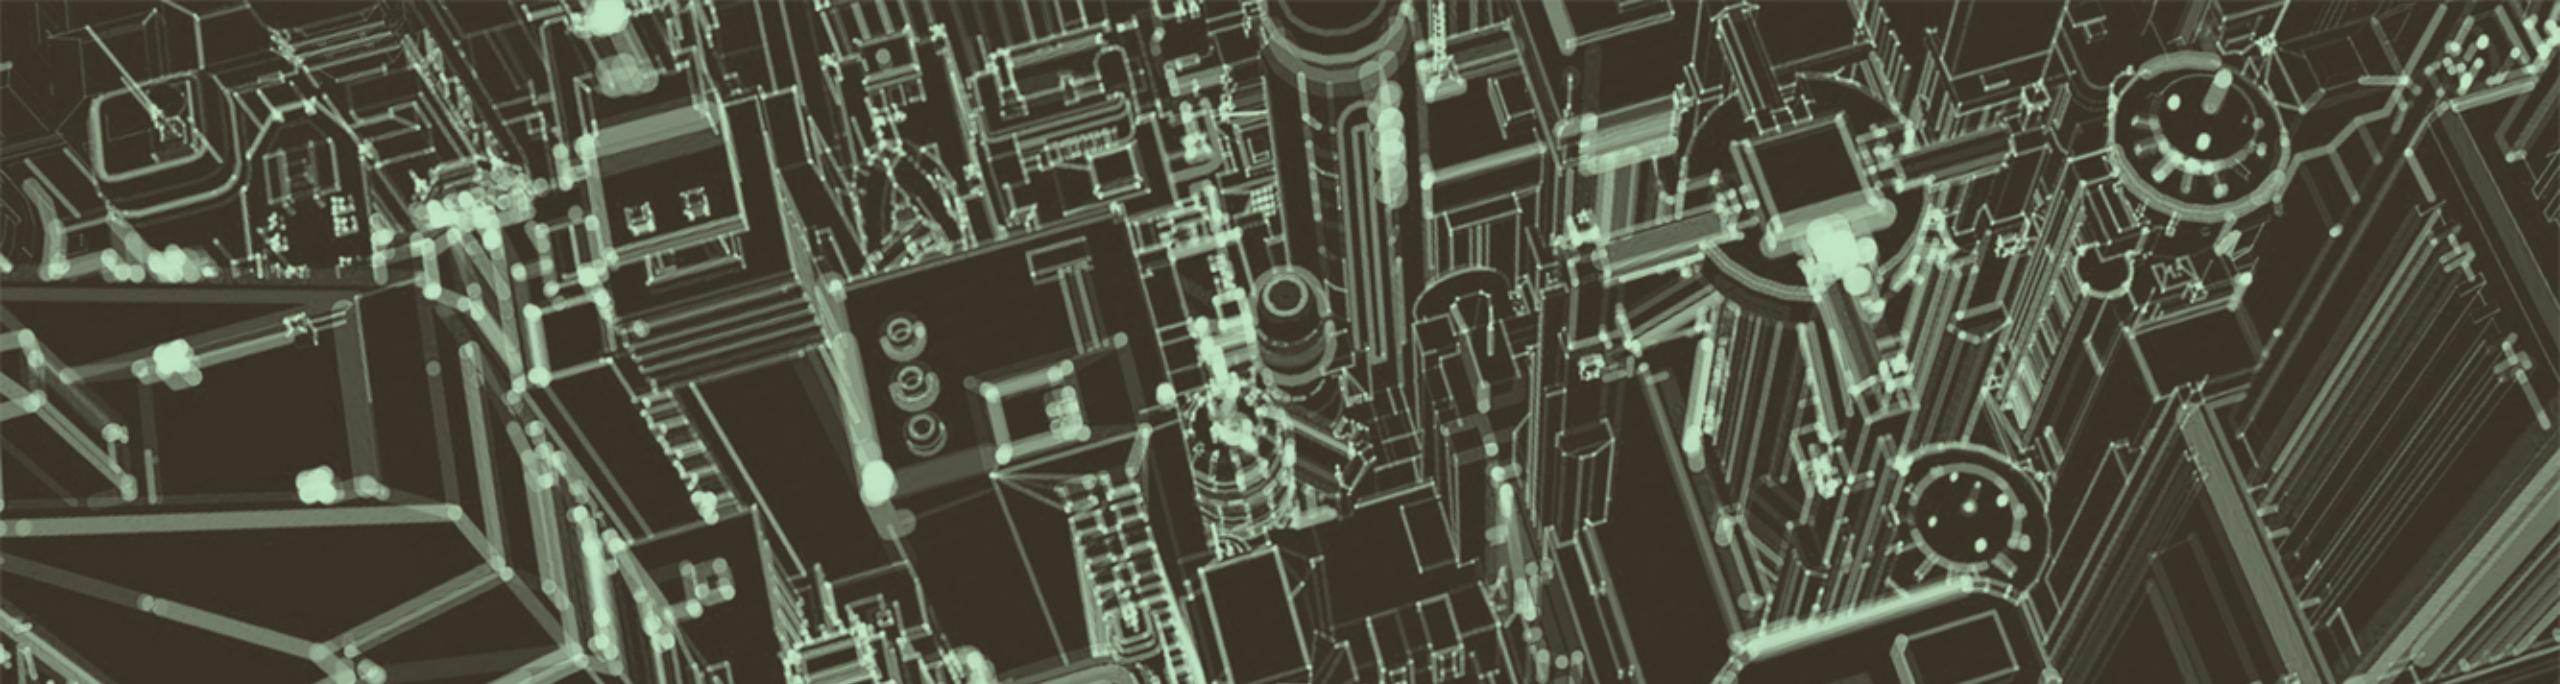

920 venues of interest

Analysis

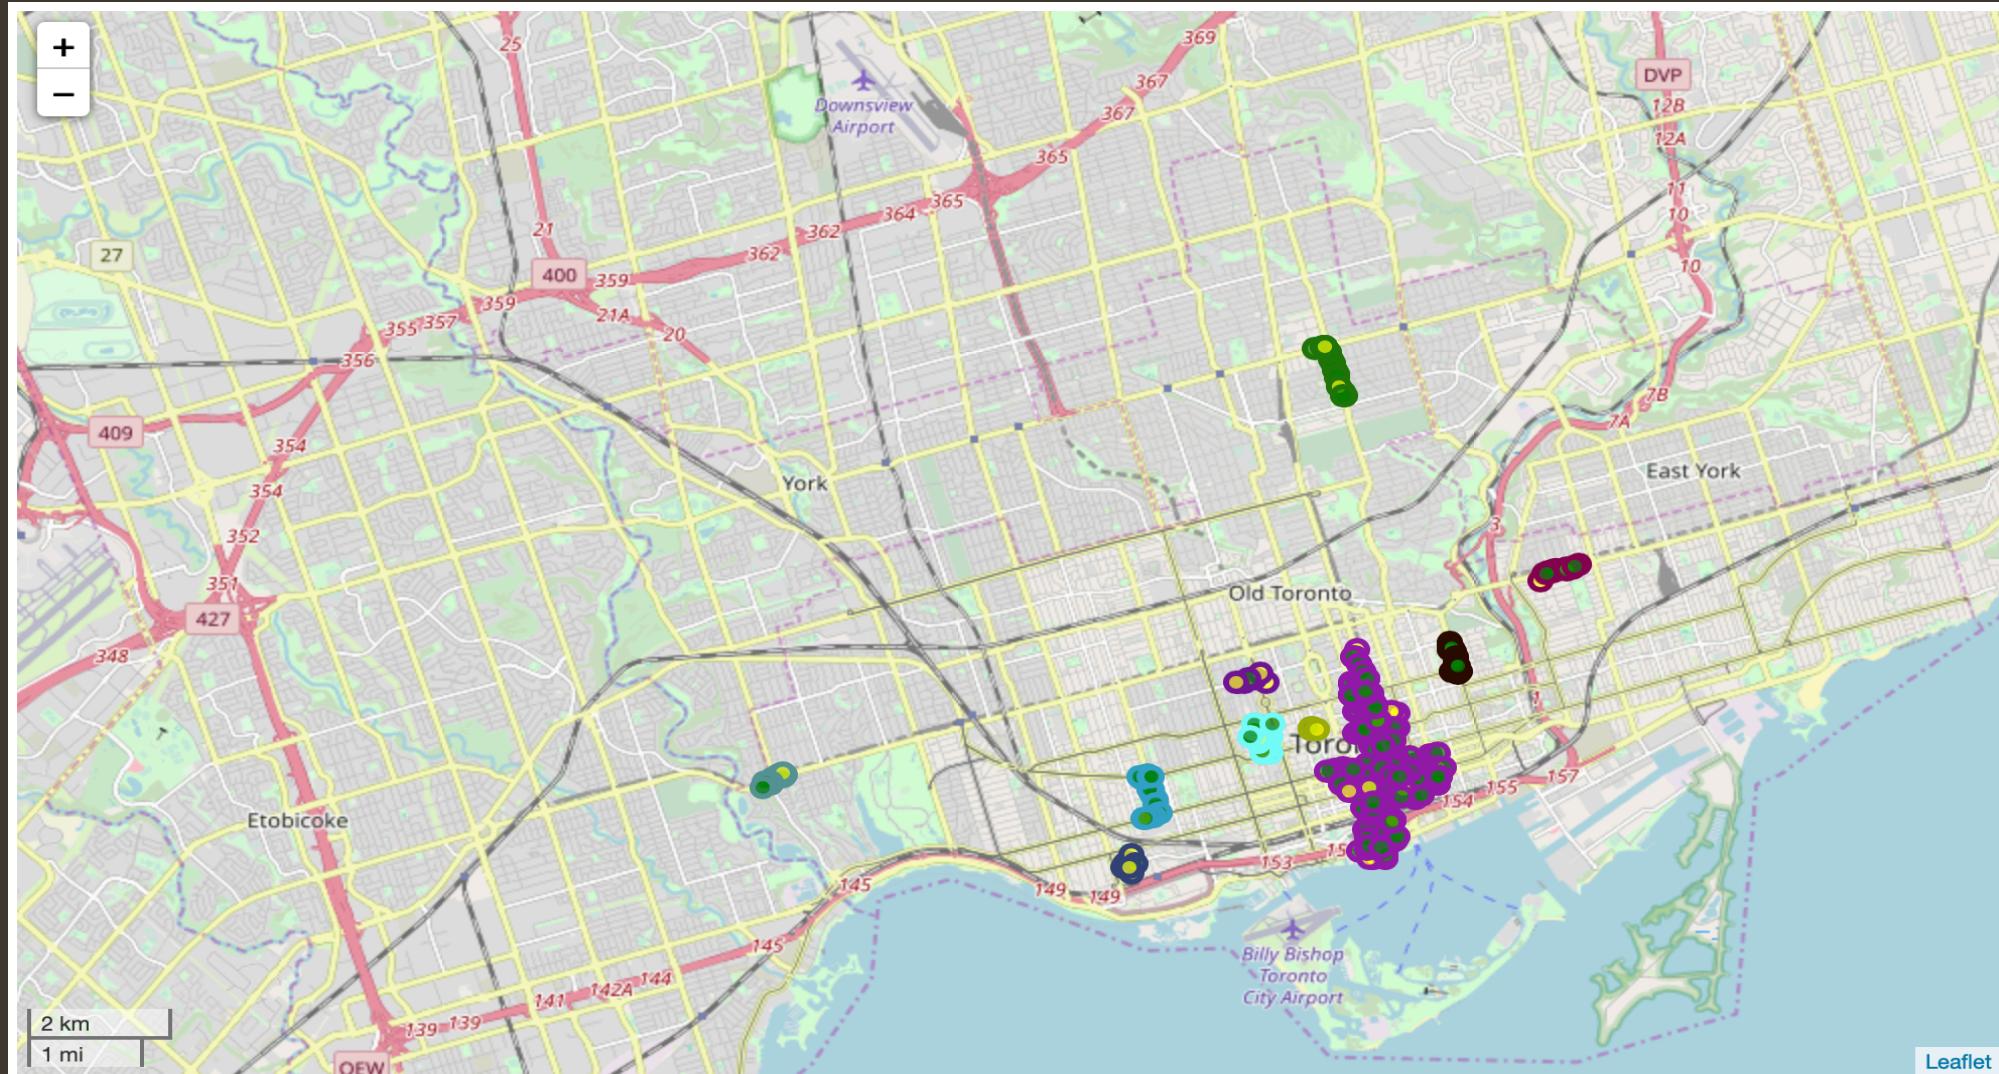

Using DBSCAN we produce clusters of venues.

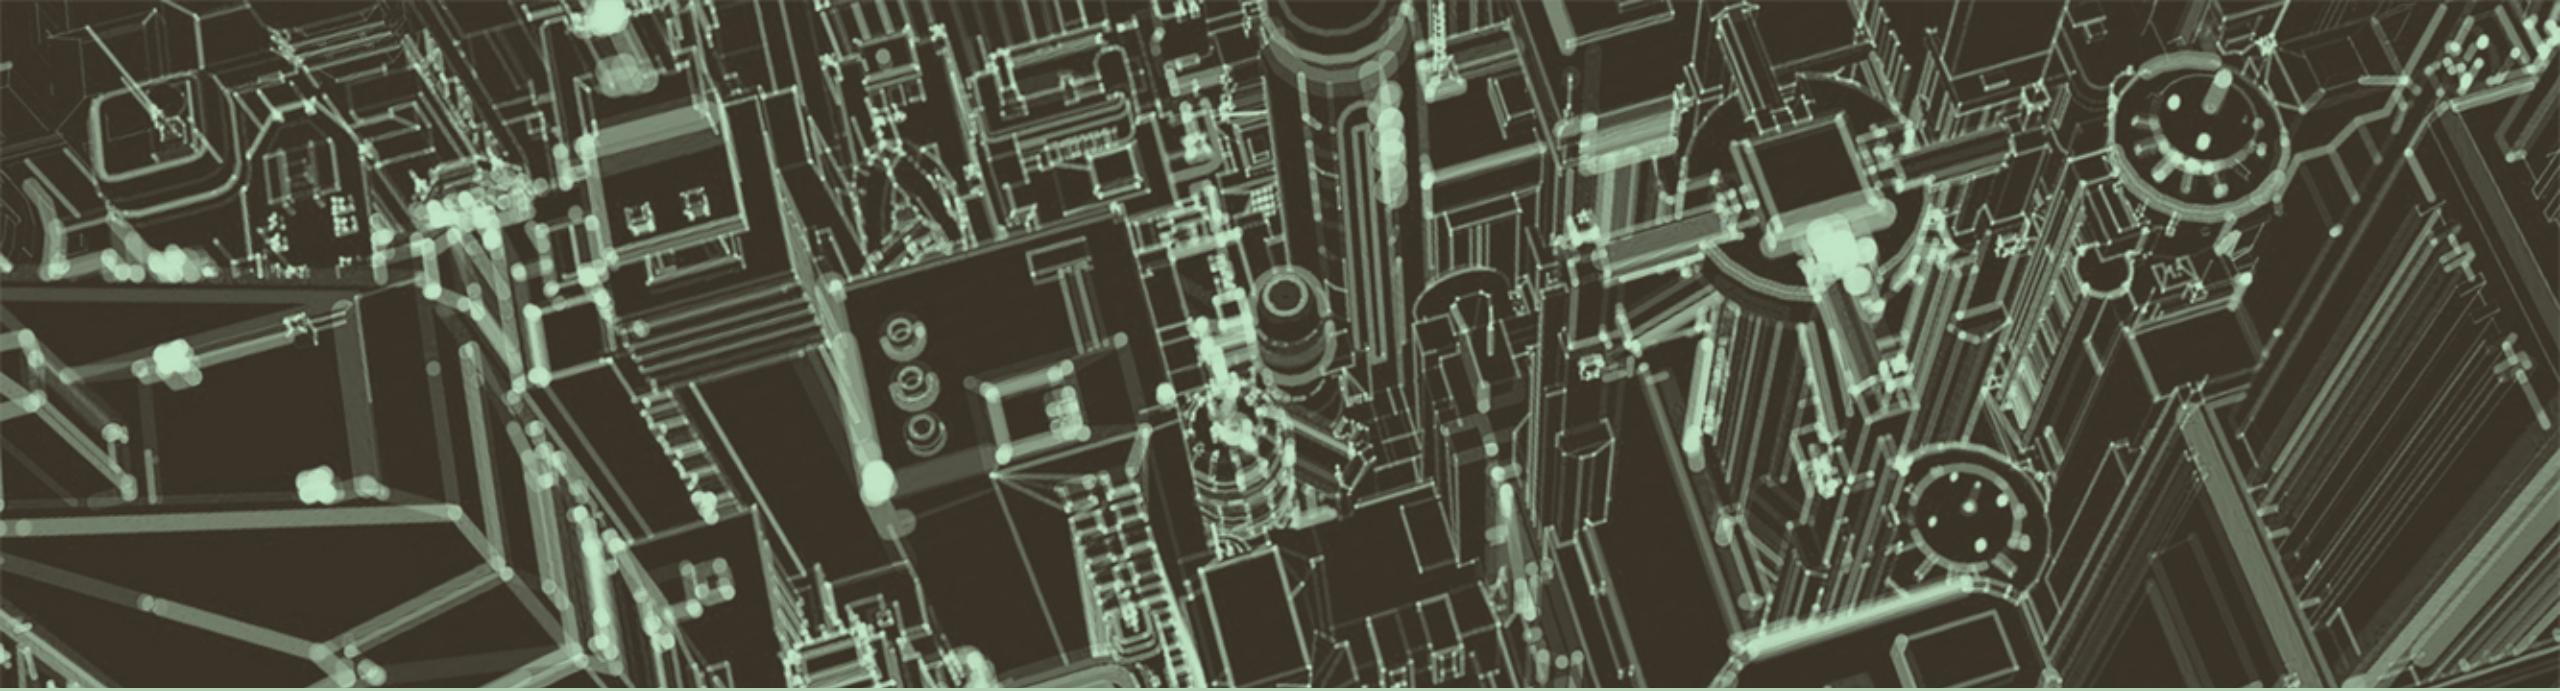

Results

We get clusters with gyms surrounded by coffeeshops within walking distance.

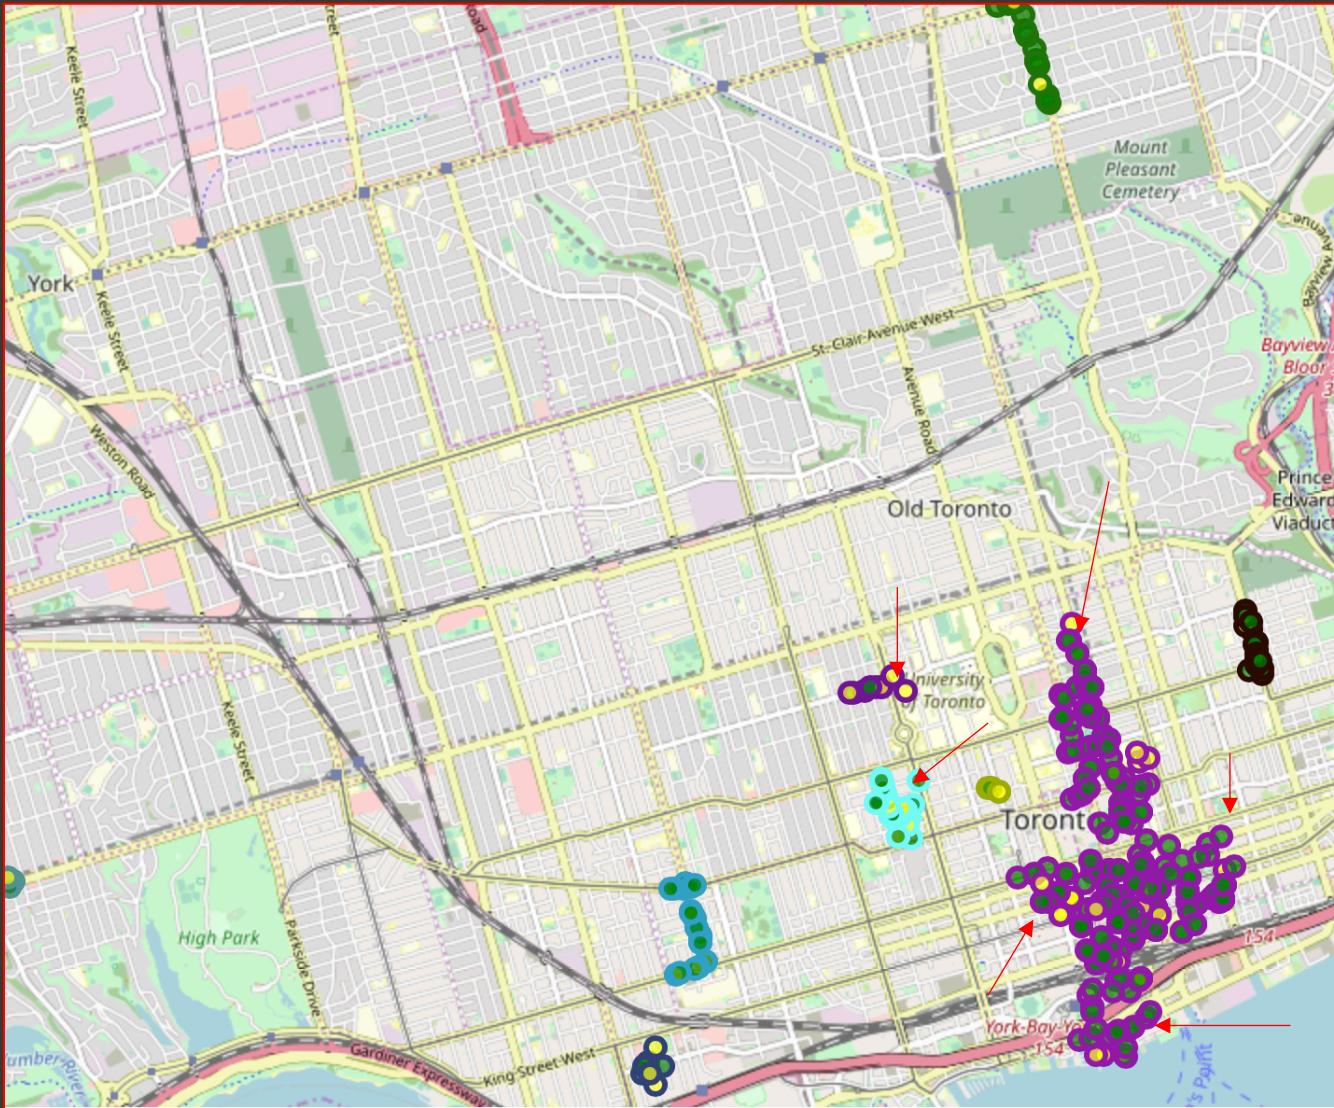

Clusters

Conclusion

Identified several clusters that are worth investigating further.

High ranking
clusters

-more than 3 gyms-
